DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in the pending application.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Listing and Amendments to the Claims:

1. (Currently Amended) A method for processing video data in a video data processing device for display on a display device having a plurality of luminous elements to suppress a dithering pattern caused by the movement of an object on the display device from appearing to a viewer observing the moving object, the moving object represented by said video data, the method comprising:

applying a dithering function to at least part of said video data in a dithering device of the video data processing device, wherein the dithering improves a grey scale portrayal of video pictures of said video data,

Art Unit: 2628

computing at least one motion vector from said video data in a motion estimator device of the video data processing device, said video data representing the object in motion on the display device;

changing at least one of the phase, amplitude, spatial resolution and temporal resolution of said dithering function in accordance with said at least one motion vector representing the movement of a moving object on a picture when applying the dithering function to said video data in the dithering device of the video data processing device to suppress the dithering pattern caused ~~be~~by the movement of the object on the display device from appearing to a viewer observing the moving object on the picture; and

outputting the dithered video data from the video data processing device to the display device to suppress the dithering pattern from appearing to a viewer observing the moving object on the picture on the display device.

2 - 6. (Previously Presented)

7 – 16. (Canceled)

17 – 25. (Previously Presented)

Response to Arguments

3. Applicant's arguments, see pages 5- 14 of Applicant's Remarks, filed 01/18/11, with respect to the 35 USC 103 rejection of claims 1-6 and 17-25 in view of Ishii et al., Kawakami et al. and Wu et al.. have been fully considered and are persuasive. The 35 USC 103 rejection of these claims has been withdrawn.

Art Unit: 2628

4. Note, a further prior art search has yielded no additional applicable, as per prior art rejection purposes, results. Therefore the claims are deemed in condition for allowance.

5. Note, the Examiner has conducted an Examiner's Amendment to remedy what is believed to be a simple typographical error in the drafting of the amendment to claim 1. The amended language is identical to that of which was amended into claim 17 and therefore the Examiner has modified the language of claim 1 to resemble claim 17 again since this seemed to be a simple typographical error of the word "be" instead of "by." If Applicant has any issues about the Examiner's Amendment, an amendment may be filed as provided by 37 CFR 1.312. (see above Examiner's Amendment introductory paragraph).

Allowable Subject Matter

6. Claims 1-6 and 17-25 are allowed.

The following is an examiner's statement of reasons for allowance:

In reference to claims 1 and 17, the prior art of record does not explicitly disclose a method of a device for processing video data to suppress a dithering pattern caused by the movement of an object on the display device from appearing to a viewer observing the moving object including applying a dithering function to at least a part of said video data to refine a grey scale portrayal of video pictures of the video data, computing at least one motion vector from said video data representing the object in motion on the display device and changing at least one of phase, amplitude, spatial resolution and temporal resolution of the dithering function in accordance with the motion vector to suppress the dithering pattern caused by the movement of

Art Unit: 2628

the object on the display device, in combination with the further limitations of claims 1 and 17 respectively.

In reference to claims 2-6 and 18-25, these claims depend upon allowable claims 1 and 17 respectively and are therefore also deemed allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
